75
years

75 YEARS DRIVING INNOVATION IN THE INDUSTRY

In 1951, the Boada Brothers patented the first cutter for hydraulic mosaic under the RUBI brand name. This milestone marks the beginning of a journey defined by the pursuit of innovative solutions within the industry.

The innovative spirit demonstrated by the founders at that time has become one of the most fundamental and enduring values within the RUBI Group teams. This attitude has been present throughout its history and has contributed significantly to the company's continuous development.

The introduction of that pioneering tool marked a turning point in the way professionals of the time worked. It allowed for more precise and efficient cuts in hydraulic mosaics, which were a fundamental part of the architecture of the era. This innovation significantly contributed to improving construction processes. This historic milestone is still, to this day, a source of pride for the company, which keeps alive the innovative spirit that inspired its founders.

Throughout these 75 years of history, the company has experienced remarkable growth and expanded worldwide. Despite this expansion, the founders' original vision has remained intact: to always stand by professionals, understand their challenges, and provide optimal solutions for their daily needs. This commitment to quality and closeness continues to be one of the organization's core pillars.

On the occasion of the 75th anniversary, the company looks back with gratitude for the journey traveled. At the same time, it faces the future with the conviction that entrepreneurial spirit, excellence, and passion, together with a clear purpose, will continue to guide us toward new achievements and ongoing innovation within the industry.

Rubi has always proved innovative over the years and continues to strive and specialize in improving its products. It also includes a very complete range that is still expanding, such as XXL tiles, which is also a challenge for the tiler and requires specific tools.

By responding to the needs of the market, another great advantage is that there are many distribution points in the region. We also stand for high quality work and RUBI is a perfect partner to finish our work to perfection. ”

THE RUBI EXPERIENCE

5 STEPS TO EXCELLENCE

RUBI ensures quality, efficiency and creativity from start to finish at every stage of the tile installation process.

This basic signage across our entire product range helps the professional find the right tool for the task at hand, providing a clear and visual solution.

Our portfolio is now organised into these 5 categories, which have been defined taking into account our customers' testimonials about their own work processes, in the more than 120 countries where we operate.

1. Preparation

This phase includes all the processes prior to the installation of ceramic and porcelain tiles, starting with the preparation and making good of the substrates and the checking of levels, followed by the layout and design of the joint pattern and ending with the preparation and application of the tile adhesive.

2. Cutting and Drilling

Although after the preparation of the adhesive, this logically takes us to the installation stage, RUBI has included the cutting and drilling phase in second place. The reason is very simple, if we take into account that the tile needs to be cut (or drilled), it cannot be installed until this step has been carried out. All installations require tiles to be adapted and resized to the installation space and, whether it is to a greater or lesser extent, a ceramic tile will always have to be cut (or drilled).

3. Installation

In this stage, we mainly focus on bringing together all the necessary tools to ensure proper handling and installation of the tile, obtaining the best results both in flatness and alignment in order to make the setting-out design a reality with maximum precision.

4. Grouting

As its name indicates, this stage includes all the tools necessary for the filling and definition of the tile joint, as well as the removal of excess material and a first cleaning stage.

5. Cleaning

As it must do, the last stage brings together everything that is necessary to deliver the perfect job. The final cleaning of any ceramic tile installation process will always make the first impression on any user. For this reason, it is as important as any of the previous stages.

Basic conditions:

≥80% Adhesive coverage (dry indoor surfaces).
 Final layer thickness: 5 mm (3/16").
 BACK BUTTERING is not required.

*Back buttering is mandatory when the required coverage is ≥95% (for outdoors or damp areas) or pieces larger than 40 x 40. (16"x16").
 To compensate for the bowing of the tile, add 2x** to the tooth size (** = deformation in the flatness of the tiles).
